

ZVA AdBlue™ Nozzle

40ltrs Per Min (Auto)

About the product

The Automatic ZVA AdBlue™ Nozzle is designed to dispense urea - otherwise known as DEF - and water in conjunction with the ELAFIX 40 adaptor. The [ZVA nozzles](#)' spout sensors will only allow fluid to pass once it has been magnetically opened by the ELAFIX adaptor fitted within the vehicle fill point. These [AdBlue™ nozzles](#) are designed to prevent misfilling AdBlue™ into a diesel tank and they will therefore only work in this configuration. If the vehicle does not have this adaptor, no flow through the AdBlue™ nozzle will be allowed.

Features of the ZVA AdBlue™ Dispensing Nozzle:

- Automatic AdBlue™ Nozzle
- Maximum flow rate: 40ltr Per Min
- Suitable for urea and water
- Supplied with ¾" Hose Barb Swivel
- Must be used with ELAFIX 40 adaptor
